## Strong favourites (70%+)

One side at or above the threshold, on at least some real results. A call built purely on the league baseline is an artefact of the prior, not a read on the game.

## How to read this

| | |
|---|---|
| **1 / X / 2** | Home win, draw, away win. The bar is drawn to scale. |
| **goals** | Projected combined goals for the match. |
| **score** | Projected goals, home–away. |
| **over 2.5** | Chance of three or more goals. |
| **btts** | Chance both teams score. |
| **under 1.5** | Chance of nought or one goal in total. |
| **W D L** | Last five results, most recent first, with goals for and against across them. |
| **dots** | How much rests on these teams' own results: three dots = 5+ games each, none = league baseline. |

### What is behind these numbers

League tables are derived by replaying past days of results, because the feed exposes no standings endpoint. A league early in its season, or newly added, will show few games played and its numbers lean on the league average instead.

Line-ups, injuries and suspensions are not in this model — the feed does not carry them.
