11
DAYS OF RESULTS

Strong favourites (70%+)

No game today has a side at 70% or better. This is normal rather than a gap in the data: baseball is the least predictable of the three sports here, and a very good team beating a very bad one is roughly a 65% proposition.

Most runs expected

How to read this

- H / A

Home and away win probability, extra innings included. Baseball has no draws.
- runs

Projected runs, home-away.
- total

Projected combined runs.
- over 8.5

Chance the total clears the standard line. Near a coin flip is correct — the run distribution is right-skewed, so its median sits below its mean.
- RL -1.5

Chance the favourite wins by two or more.
- F5 total

First five innings. A proportional split of the game projection, not measured inning data.
- W L

Last five results, most recent first, with runs for and against across them.
- dots

How much rests on these teams' own results: three dots = 5+ games each, none = league baseline.

Starting pitchers are not in this model

In baseball the starting pitcher is the single largest per-game factor there is — larger than anything the team run rates behind these numbers can capture. The feed carries no probable-pitcher data.

So treat a game with an ace against a bullpen day as under-modelled here. Park factors, weather, bullpen usage and injuries are absent for the same reason.
