|---|---|---|---|
| GAMES | AT 70%+ | TEAMS TRACKED | DAYS OF RESULTS |

## Strong favourites (70%+)

*No game today has a side at 70% or better. This is normal rather than a gap in the data: baseball is the least predictable of the three sports here, and a very good team beating a very bad one is roughly a 65% proposition.*

## Most runs expected

*No games today.*

### How to read this

| | |
|---|---|
| **H / A** | Home and away win probability, extra innings included. Baseball has no draws. |
| **runs** | Projected runs, home–away. |
| **total** | Projected combined runs. |
| **over 8.5** | Chance the total clears the standard line. Near a coin flip is correct — the run distribution is right-skewed, so its median sits below its mean. |
| **RL -1.5** | Chance the favourite wins by two or more. |
| **F5 total** | First five innings. A proportional split of the game projection, not measured inning data. |
| **W L** | Last five results, most recent first, with runs for and against across them. |
| **dots** | How much rests on these teams' own results: three dots = 5+ games each, none = league baseline. |

**Starting pitchers are not in this model**

In baseball the starting pitcher is the single largest per-game factor there is — larger than anything the team run rates behind these numbers can capture. The feed carries no probable-pitcher data.

So treat a game with an ace against a bullpen day as under-modelled here. Park factors, weather, bullpen usage and injuries are absent for the same reason.
